

ABSTRACT

A splash-prevention paper that is to be used in a toilet bowl to suppress the splash of soil water when the feces fall into the toilet bowl during the bowel movement. The splash-prevention paper of the present invention is a paper-like thin sheet. It may be folded or be in rolls for easy to handle before application. In the application, the splash-prevention paper floats on and covers the major portion of the water surface in the toilet bowl. It has plurality of floating arms, which allows the feces to pass, meanwhile, maintains an effective coverage of the water surface.
